Ex 17 Experiment to understand Linear Regression for a given data set.

```
import matplotlib.pyplot as plt
from sklearn.linear_model import LinearRegression

X = [[1], [2], [3], [4], [5]]
y = [2, 4, 5, 4, 6]

m = LinearRegression().fit(X, y)
print("Prediction:", m.predict([[6]]))

plt.scatter(X, y)
plt.plot(X, m.predict(X), color='red')
plt.show()
```

```
Prediction: [6.6]
```
