Ex 20 Experiment to understand K-means clustering algorithm for a given data set.

```
import matplotlib.pyplot as plt
from sklearn.cluster import KMeans

X = [[1, 2], [2, 3], [3, 4], [8, 8], [9, 10], [10, 9]]

m = KMeans(n_clusters=2, random_state=0, n_init=10)
y = m.fit_predict(X)

print("Clusters:", y)
plt.scatter(*zip(*X), c=y)
plt.show()
```

```
Clusters: [1 1 1 0 0 0]
```
